

## 1. INTRODUCTION

Suzhou Quick Peng ampere hour meters well developed ahead for many years in national sales. **SPA-96BDAH** Series amp-hour meter for DC power measurement, the unit of measurement for " Ampere hour ( AH ) ", is widely used in the chemical industry, electroplating, batteries charging/discharging and electro-technical industries related to the production management; such as nickel screen, laser mark making, plate-making and the precious metals electroplating brightener applications.

## 2. FEATURES

- Measurement and display the ampere-hour cumulative value, real time current, single row of eight-digit digital tube display, position of the decimal point and measuring range on-demand settings;
- Optional RS485 RS232 Interface (Modbus-RTU Protocol) address, the baud rate from the device can be set by any of the front panel buttons;
- Shunt-current values can be set, SPA-96BDAH DC system is available for different current levels;
- Auxiliary power default to AC220V, optional DC24 or AC/DC220V;
- Configurable relay alarm output and analog on;
- Small and light size with enhanced anti-interference ability.

## 3. SELECTION CODES

Example

Model: SPA-96BDAH-A75-H-AD

Input: 0~2000Adc/0~75mVdc (Bus current can be set)

Display: 0.00~99999999Ah

Outputs: relay (dosing time can be set up)

Input power: AC220V

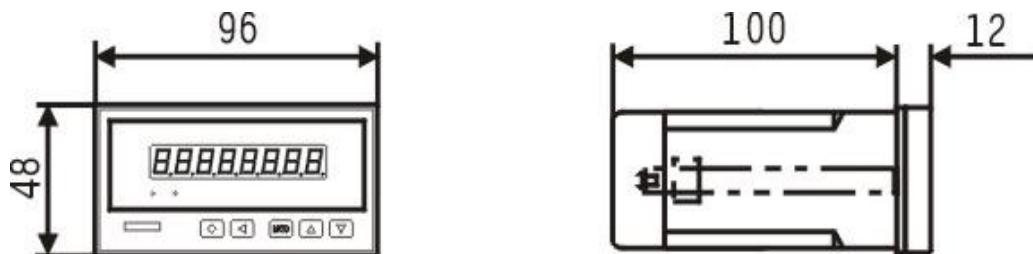

Description: this product is 0~2000Adc converting the DC current signal splitter 0~75mVdc. As DC current signal input signal, 8 LED display accumulated values, press the key to switch 4 LED real-time current, ampere hours limit alarm relay output; Auxiliary power supply for AC220V.

#### 4. TECHNICAL SPECIFICATIONS

		Technical specifications
Input signal	Current Flow	Current input: 0~75mVdc, or other special custom specifications
		Current 4 LED Display, display range 0~9999. The decimal point and measuring range on-demand settings
	Precision	≤ 0.2%
Ampere hour	Measurement display	Ampere hour 8 LED Display, 0.00~99999999, the decimal point automatically move
	Precision	≤ 0.2%
Alarm		Accumulate as an upper limit alarm, alarm value, and auto-recover time can be set up
	Relay output	Relay output, contact capacity 220V AC, 3A
Optional features	Communications	RS485/RS232 Communication interface, Modbus-RTU Protocol, address 0~99 can be set up, transfer rate 2400~19200bps can be set up
	Analog output	Instantaneous current transmitting output, optional current or voltage output signal, transmission range can be set
Auxiliary power supply		AC/DC220V, DC24V; Power consumption < 7VA Special power supply can be customized
Isolation voltage		2kV/min
		> 50MΩ
External environment		Operating temperature: 0 °C ~50°C
		Relative humidity: 90%RH 40°C (No condensation, no corrosive gases)

#### 5. INSTALLATION

##### 5.1 Overall dimensions

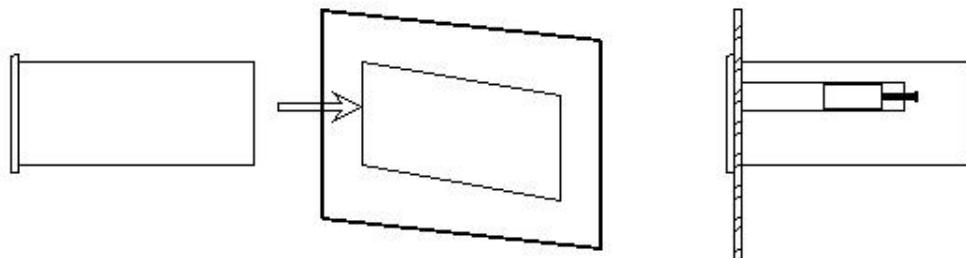

Overall dimensions: 96mmx48mmx112mm (length x width x depth)

Installation: Panel hole installation, minimal installation depth: 100 mm

Open size: 92mm×45mm

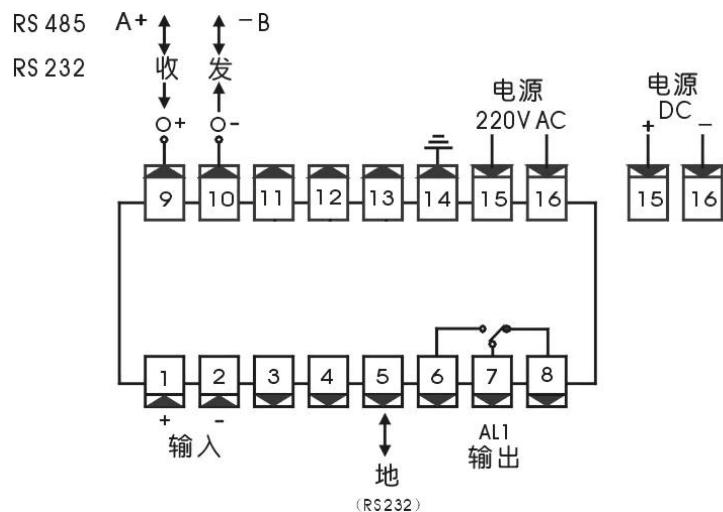

Weight: about 600g

## 5.2 Installation methods

1. Open the cabinets hole on a size for 92x45mm;
2. From the package, take out the box SPA-96BDAH, mounting brackets and mounting screws;
3. Insert the SPA-96BDAH into the opened cabinets;
4. On the inside of the switch cabinet installation is fixed on the bracket and tighten the mounting screws;

## 6. TERMINALS SETTING

1. To ensure safety, the wiring must be carried out after the power.
2. Make sure earthed and do not connect with other terminal

This manual provides the basic connection diagrams. The interpretation please subject to the Chinese operation manual.

## 7. DISPLAY AND CONTROL BUTTONS

		Says Ming
Display	① Accumulated value	<ul style="list-style-type: none"> <li>Ÿ Displays the value of accumulated ampere hours, display range 0.00~99999999Ah, starting point for 2, the accumulated value increases automatically shift the decimal point</li> <li>Ÿ Display the current value, display range 0~9999</li> <li>Ÿ In the parameter set state, displays the parameter symbol and parameter values</li> </ul>
② LEDs		<ul style="list-style-type: none"> <li>Ÿ Alarm status indicator</li> </ul>
The Function Keys	③ Set key	<ul style="list-style-type: none"> <li>Ÿ Setting mode; press and hold 2 seconds without releasing</li> <li>Ÿ In setting mode, the parameter symbol is displayed, press and hold 2 seconds without releasing into the next set of parameters or return to mode</li> </ul>
	④ The left Key	<ul style="list-style-type: none"> <li>Ÿ In the measurement condition is not valid</li> <li>Ÿ In a mode of settings: ① redeployed the original parameter value</li> <li>Ÿ Move to modify</li> </ul>
	⑤ Confirm button MOD	<ul style="list-style-type: none"> <li>Ÿ Display cumulative value and current value</li> <li>Ÿ while ins mode of setting. modify parameter values</li> </ul>
	⑥ Add key ▲	<ul style="list-style-type: none"> <li>Ÿ longer than 6 seconds an accumulated value to zero</li> <li>Ÿ Increase the parameter value, or change the type setting</li> </ul>
	⑦ Decrease key ▼	<ul style="list-style-type: none"> <li>Ÿ Reduce the parameter values, or change the type setting</li> </ul>

## 8. PARAMETERS SETTING

### 8.1 Parameters list

1 Set of parameters alarm setting value (no alarm, no parameters this group)

Symbol	The name	Content	Address	Range of values	Reference
AL_IH	AL1H	When an alarm value set	00H	0~9999	1

2 Set of parameters Alarm configuration (no alarm, no alarm parameters)

Symbol	The name	Content	Address	Range of values	Reference
oR	oA	Password	10H	0~9999	2
EYR_I	tYA1	Alarm recovery time	1EH	0~9999	3

3 Set of parameters measurement and display

Symbol	The name	Content	Address	Range of values	Reference
inCH	inCH	Input signal selection	30H		--
in-d	in-d	Current position of the decimal point selection	31H	0 ~ 3	4
u-r	u-r	Current range lower limit	32H	0	--
F-r	F-r	Current range upper limit	33H	0~9999	--
cHo	cHo	Resect of small signal threshold	39H	0 ~25	5
in-A	in-A	Zero point correction	3CH	-1999~9999	6
Fi	Fi	Full scale correction	3DH	0.5-1.500	7
FLtr	FLtr	Digital filter time constant	3EH	1 ~ 20	8
F-H	F-H	Measurement time selection	3FH	0 ~ 2	9

4 Set of parameters communications and the transmitter output

Symbol	The name	Content	Address	Range of values	Reference
Add	Add	Communication address	40H	0 ~ 99	--
bAud	bAud	Communication speed selection	41H	0 ~ 3	10
ccLr	ccLr	Zero out communications parameters	42H	0~9999	11
ctd	ctd	Alarm output control options	44H	0, 1	12
cta	cta	Transmitter output control	45H	0, 1	13

		right select			
oA1	oA1	Alarm set password select	46H	0, 1	14
JocS	JocS	Calibration mode	47H	0~2	15
Ac	Ac	Totalizer value zero to select	4BH	0, 1	16
oP	oP	Transmitter output signal selection	4DH	0 ~ 2	17
bA-L	bA-L	Transmitter output lower limit	4EH	0~9999	--
bA-H	bA-H	Transmitter output ceiling	4FH	0~9999	--

Reference:

1. When an upper limit alarm output, if the parameter is set to 0, The instrument does not determine the alarm;
2. The instrument factory password 1111. The parameters oA1 cannot be entered when no password has been set. Password on the instrument is powered on or when 1 minutes when there is no key operation is automatically cleared;
3. When an accumulated value reaches the alarm set value, the relay outputs, delay Alarm recovery time Hou, automatic recovery; Alarm recovery time Parameter in seconds. When set to 0 , alarm is not automatically restored;
4. 0 ~ 3 Corresponds to the order 0.000, 00.00, 000.0, 0000;
5. Setting range 0~25, F-r represents (Current range limit) of 0%~25%, if the current is less than the threshold, according to 0 Processing;
6. Display values = Before the zero point correction of the display value + En-R;
7. Display values = Amendments before the display value × FC;
8. Used to overcome the instability is displaying fluctuations, set the value of the larger, then stronger, but reflected the slower to changes in input signal;
9. 0 for ---F (In minutes), 1 for ---H--H (In hour), 2 for ---S (Measured in seconds);
10. 0 ~ 3 Corresponds to the order 2400, 4800, 9600, 19200;
11. By means of communication, after setting to this parameter 2222, accumulated value to zero;
12. 0 is OFF, 1 is ON, parameter t set to ON, alarm output controlled by communication command;
13. 0 is OFF, 1 is ON, parameter tR set to ON, transmitting output controlled by communication command;
14. 0 is OFF, 1 is ON, parameter set to ON, alarm parameters controlled by password, will be able to view, but changes cannot be saved;
15. 0 is No parity, 1 is Odd parity, 2 is the corresponding parity;
16. 0 is OFF, 1 is ON, only when this parameter is set to ON, the instrument can be zero;
17. 0 is output 4mA-20mA (or 1 V-5V),1 is output 0mA-10mA, 2 is output for 0mA-20mA (or 0V-5V) ;

## 8.2 Parameter setting flow chart

Press and hold the set key  for 2 seconds, go to main settings to display parameter 1st symbol;

Key  to select other parameters in this group;

Key  to set for the current parameter value flashes as amended through

Key  to move to modify,

Key  or Key  to modify the parameters to the values that you want;

Key  to save the setting and go to the next parameter;

After entering the setting mode, if 1 Minutes without operation, the instrument will automatically exit the setting mode

**Flow chart of instrument specific parameters set as follows:**
